**Thomas Murray Orbit Security** is a fully automated and scalable threat intelligence platform for companies of all sizes and industries to monitor their Enterprise and Third-Party Cyber Risk. The scores are objective ratings of an organisation's publicly visible network footprint.

Enterprise Risk

Monitor your company's visible digital assets to build long-term security and benchmark against peers.

Third-Party Risk

Manage any number of third parties with automated, intelligent ratings.

With Orbit Security you can:

- Monitor your company and its third parties' cyber risk.
- Discover breaches and vulnerabilities.
- Prevent attacks and build resilience.
- Receive new risk alerts, live enquiries, and peer benchmarking.
- Automated, intelligent security ratings.

How secure is your organisation?

Rating from 0–1000, the platform monitors for breaches and vulnerabilities which could leave a company exposed, combining open-source intelligence and objective analysis. Benchmark against similar banks, funds, tech providers and others, get real-time security alerts and use live enquiries to streamline remediation. Rapidly improve your Enterprise and Third-Party Security.

How it works

1. Provide Thomas Murray with a single domain (e.g., "thomasmurray.com").
2. Machine Learning algorithm discovers your public network footprint; the "attack surface".
3. Continuously monitor for risks and vulnerabilities in your network.
4. Build resilience with analytics, alerts, benchmarking, and remediation.
