

Secure

Our Secure range of services is a blend of cutting-edge technology and strategic insight, designed to proactively fortify your cyber defences.

— Proactive security monitoring

Proactive security monitoring can help stop threats before they do any damage. We use a combination of incident response tools in your environment, external surface monitoring, and Thomas Murray's threat intelligence to protect your organisation.

This approach provides a holistic view of your cyber environment, enabling Thomas Murray to proactively address emerging threats, head off potentially malicious activities, and improve your operational resilience and security.

— Security architecture services

Cyber security is rarely one-size-fits-all. Our experienced and multidisciplinary team can help create controls and frameworks that are uniquely designed to fit your digital estate.

From carefully designed access control policies to a custom security framework, we can help ensure that your defensive strategy is not just robust but precisely aligned with the needs of your organisation.

Thomas Murray is your partner in designing cyber security controls that can withstand the threats presented by the constantly changing digital landscape.

— Portfolio security monitoring

Managing cyber security risks is essential to protecting your portfolio's investment value. The continuous monitoring of cyber risk is essential to this preservation of value.

Our experts will work with you to define a risk model, taking into account the type of investment, investment lifecycle, relationships with entities and the profile of the portfolio.

The output of this risk model is then compared against the output of our Orbit Risk platform, enabling a direct comparison to be made between the perceived risks, responses to questionnaires and your organisation's external exposure to the internet.

Business continuity advisory and assessments

Through rigorous assessments, we can identify potential vulnerabilities and threats, and evaluate existing business continuity plans to ensure they are always fit for purpose.

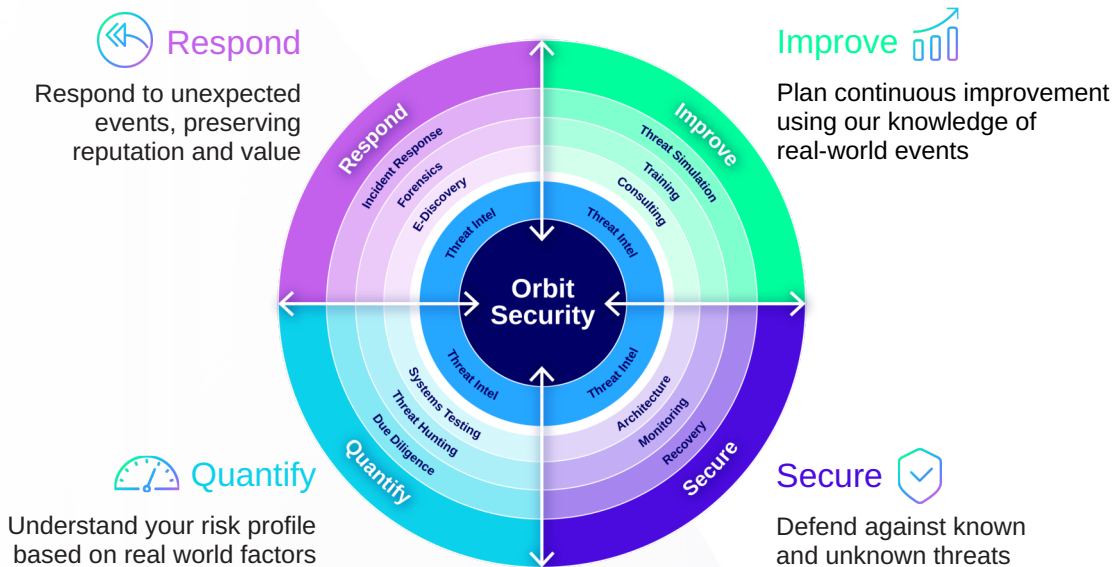

We collaborate with your teams to develop and refine further strategies, integrating advanced measures, controls, and technologies to equip you with the tools and insights you need to thrive in the face of adversity. This ensures that your business operations can resume as soon as possible after an incident, and that your data integrity is maintained.

Recovery and remediation services

When breaches occur and help is needed, we can be relied on to provide a comprehensive recovery plan.

We will support your business as it returns to normal operations, from containing and eradicating threats and identifying initial attack vectors, to creating remediation plans for recovering your valuable digital ecosystem.

When the unexpected happens, we are your cyber security first-responders, dedicated to getting you back up and running efficiently, and fortifying your environment for a more resilient future.

Threat intelligence is embedded in everything we do. Our cyber advisory experts provide actionable data and apply the latest response methods to protect you and your communities from ever-changing and evolving cyber threats.

Respond

Respond to unexpected events and protect your reputation and assets

- Incident readiness
- Incident response
- Active threat hunting
- Forensic services
- Expert services
- Litigation support and eDiscovery

Improve

Use our experience to plan for continuous improvement

- Training
- End-to-end threat simulation
- Attack path validation and control validation
- Cyber risk consulting

Secure

Defend your organisation against known and unknown threats

- Proactive security monitoring
- Security architecture services
- Recovery and remediation services
- Business continuity advisory and assessments

Quantify

Understand your risk profile based on real-world factors

- Cyber due diligence
- Proactive threat hunting
- Systems testing
- External attack surface monitoring
- Custom threat intelligence research
